

## Bachelor of Science in Exercise Science

---

The following Program Learning Outcomes have been established by Evangel faculty to define the areas of knowledge and skills that students graduating from this major degree program should have developed.

1. Explain human movement and concepts related to the anatomical, physiological and biomechanical aspects of human movement.
2. Plan and implement a variety of developmentally appropriate exercise programs.
3. Assess health status, conduct fitness testing, and prescribe and administer exercise programs.
4. Competently use technology to enhance learning and enhance personal and professional productivity.
5. Demonstrate active involvement in the Christian community and community at large as knowledgeable and skilled citizens within the field of exercise science.
